

Augusto Carmona

Data Engineer | Data Platform & Architecture | AI/Agentic Data System

Rosario, Argentina | augustocarmonaperez@gmail.com | linkedin.com/in/augustocarmona | github.com/AugustoCarmona

PROFESSIONAL PROFILE

Computer Engineer and Data Engineer with experience in data platform architecture, analytics engineering, operational systems, and AI automation. Currently responsible for the design, evolution, and operation of CitizenGO's central operational database, with end-to-end technical ownership of modeling, security, standards, testing, deployments, and documentation. Previous experience with GCP, BigQuery, dbt, Azure, Databricks, Spark, ETL/ELT, and RPA, working with organizations such as Mercado Libre, Insud Pharma, Telecom, and TGS. University lecturer in Data Science, focused on dimensional modeling, data warehouses, and web fundamentals. Experienced in fully remote work and collaborating in English with distributed teams across the Americas and Europe.

PROFESSIONAL EXPERIENCE

Data Engineer - Data Platform & Architecture Feb 2025 - Present

CitizenGO | International Remote

- Conceived, designed, and implemented MODB (Main Operational Database) end to end: CitizenGO's new central operational platform, replacing previous transactional databases and consolidating data used by multiple applications through microservices.
- Designed MODB's data architecture: domains, hundreds of tables and relationships, modeling conventions, RLS, roles, migrations, views, indexes, pgTAP testing, and a data catalog. The platform is built for large-scale workloads and an agentic-first approach.
- Maintain technical ownership of MODB in production: quality standards, PR review and rejection, releases and rollback, ADRs and specs, integration support, and resolution of data incidents.
- The Data Catalog and new operational model substantially improved shared business understanding among developers and managers, reducing friction when building features and analyzing data.
- Worked with the project lead on the BigQuery data warehouse refactor with dbt, building data marts that gave analysts more autonomy for dashboards and reporting; previously evaluated Dataform on GCP.
- Built automations and agents for data processes, including an agent that receives campaigner requests and automatically responds in Asana with Meta Lead Form Ads reports.
- Regularly coordinate deliveries with 2-3 developers, define technical standards affecting all of Technology (~15 people), served as Buddy to four new hires, and delivered internal data modeling talks in Florence (2025) and Perugia (2026).

Professor Jul 2025 - Present

Universidad Austral - BSc in Data Science | Argentina

- Design and teach course content for approximately 50 students per year in Internet Workshop I and Introduction to Online Marketing and Digital Business.
- Teach the client-server model, JavaScript, HTML, and CSS, and translate marketing needs into analytical solutions through dimensional modeling and Kimball-style data warehouses.
- Have full ownership of technical course content: syllabus, materials, exercises, practical assignments, and assessments; also developed a public hands-on exercise with SQL, DuckDB, a star schema, and Power BI.

Senior Data Engineer Aug 2024 - Feb 2025

Quales Group | Argentina

- For Mercado Libre, delivered continuous analytical tables for Looker in intensive 2-4 week projects, using BigQuery and practices aligned with Data Mesh.
- For Insud Pharma, independently took over a complex inherited ETL, added a new group company to the pipeline, and validated existing data integrity as the flow was extended.
- Worked primarily on building, maintaining, and evolving ETL/ELT pipelines for different clients and cloud stacks.

Data Engineer Aug 2022 - Aug 2024

OSDEPYM | Argentina

- Implemented data solutions in Azure Cloud to transform structured and unstructured sources using Azure Data Lake, Azure Databricks, Apache Spark, and Azure Data Factory.
- Built a payment reconciliation tool with Mercado Libre to detect installments that were paid but not correctly reflected in collection systems, and insert the missing records into the database.
- Designed and maintained pipelines, reporting processes, and partitioning, security, and layered storage mechanisms to improve performance and integrity.

Jr. RPA Developer -> Sr. RPA Developer Sep 2020 - Aug 2022

EY | Argentina

- Formally promoted from Jr. to Sr. RPA Developer after working on automation and solution development for enterprise clients.
- For Telecom, developed automations with Power Automate, Python, and Microsoft OCR to extract and process invoices and credit notes, with persistence in MSSQL.
- For TGS, built multiple automation bots; also collaborated with teams in India on a global Python ETL and a query web application using Flask and React.
- Additional experience with Blue Prism and business process automation in corporate environments.

SELECTED PROJECTS

vectorized-context-rag - Personal project started in 2024: a Python RAG chatbot about car reviews, with ETL, embeddings, ChromaDB, OpenAI, vector search, and a local offline/fallback mode.

practica-imond - Teaching repository for building a data warehouse from simulated operational data using SQL, DuckDB, a star schema, and Power BI; includes a dataset and execution and validation tooling.

TECHNOLOGIES

Data & Databases: SQL, PostgreSQL, Supabase, BigQuery, dbt, Data Warehousing, Kimball, Data Modeling, ETL/ELT, DuckDB

Cloud & Platform: GCP, Azure, Vercel, Azure Databricks, Apache Spark, Azure Data Factory, Azure Data Lake

Engineering: Python, GitHub, CI/CD, pgTAP, APIs, RLS, roles/permissions, architecture documentation and ADRs

AI & Automation: OpenAI, RAG, embeddings, ChromaDB, agents, MCPs, OpenClaw, Power Automate, Blue Prism

Web: JavaScript, HTML, CSS, Flask, React

EDUCATION

Computer Engineering - UADE | 2019 - 2024

LANGUAGES

Spanish: Native English: Professional C1 (daily work in English; B2 certifications from EF SET and ECCE)

ADDITIONAL INFORMATION

European Union citizen (Spanish passport) | Available for remote opportunities in the U.S. and Europe | Open to contractor engagements
